

# Copper 2meter/70cm J pole Dual Band Collapsible J-Pole Antenna FREE SHIPPING

US \$40.00 - Listed on Ebay... [{click here}](#)

*Note: This is the unit I purchased. Very good quality. The seller, Cliff was very good to work with. [Kim Hayes]*

## PLEASE READ BEFORE PURCHASING

- Currently the lead time for shipping is 14+ BUSINESS DAYS
  - Shipping via UPS or Fed EX only....NO SHIPPING TO PO BOXES
  - Shipping is FREE
  - This antenna is tuned for 2meters and also works on 70cm
  - This J-Pole is made from 1/2 inch solid copper pipe and can be broken down into 2 pieces, each about 34 inches, which makes it convenient to use for Emergency, Public Service and Field Day events, etc. It is also great for your base unit as the connectors are water tight.
  - It is tuned for lowest SWR at 146.00 and is less than 1.5 across the entire 2 meter band and can also be used on 70cm as that band is a close third harmonic of the 2 meter band. SWR in the 70cm band is under 2.0 the entire band but keep in mind, this is primarily a 2 meter antenna, but will also work on 70cm.
  - The coax connector is a standard SO 239 that is pop riveted and soldered (see photo). If you want to use it with an HT that has either an SMA or BNC connector, you can use the appropriate adapter on the HT so that a standard PL 259 can be connected to the HT. These are available online and at most "hamfests".
- Overall length is 65 inches so it will fit in most attics if needed due to an HOA. It is also great for use inside if needed....see photo of it mounted in a condo next to the mantle. For mounting outside, look at the photos of how several hams have mounted it and sent the photos to me. I have used my personal one many times at public service events....look at the photo of it mounted next to my van at a Bike MS rest stop.
  - For use as a base antenna, the "stub" easily attaches to a mast, or can be inserted in the open end of a mast. For the Public Service events I work, I just insert it in the end of a push-up pole...see photo of my rest stop setup for MS bike ride and other events. For longer term usage, I suggest attaching to the mast with either U-bolts or hose clamps. I have used my personal one with up to 300 watts with no problem and it can handle 500+ watts.
  - If you need a "stealth" (HOA friendly) antenna you can paint it with non-metallic paint to blend in with the surroundings. Two other novel "stealth" solutions are to put it in a large flower pot on the deck and cover with plastic flowers, or paint it the color of a tree trunk and lean it against the tree...see if you can find the antenna in one of the photos. Other photos show how others have mounted it...both permanent and temporary.
  - Included with each antenna is an official ARRL "Band and Worked All States" chart. I also include labels with your call sign that you can use on the antenna or radios, etc. Please include your call sign when you order or in a separate message...otherwise I will look it up in QRZ. Both are "with my compliments."
  - All my items have an unlimited warranty....so if you have a question or problem, please contact me so we can get it corrected.

- Please click on "ask a question" if you need more information, and also on the "store" links to see my other antennas (1.25 meters, MURS, and NOAA and of course the personalized handcrafted oak call signs which are the perfect addition to your shack.

Check me out on QRZ073, Cliff KCØSDV
